DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 41-59, 66-75, 78, 80, and 83, drawn to a driver for encapsulating an IP packet within another IP packet, classified in class 709, subclass 230.
- II. Claims 60-65, 76-77, 79, 81-82, and 84-86, drawn to a driver for routing an IP packet through an IP tunnel, classified in class 709, subclass 238.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as lacking the use of an IP tunnel to send packets to another computing device. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2143

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper. Support for the different classifications is as follows:

Group I is directed towards "controlling the format and relative timing of transfer of data between the computers in order to maintain communication" which is the definition of class 709, subclass 230. However, Group II is directed towards "selecting a path via which the computer will transfer data". This path is the IP tunnel described in the independent claims of Group II and which is not found in Group I. By this rationale it is believed that the search required for Group I is not required for Group II. While the search may overlap, it is not believed to be coextensive.
